Introduction To The Command Line

Getting started with Terminal

The Command Line is a text-based interface that allows you to communicate with your computer to accomplish a wide range of tasks. You will use the skills you develop in this lesson when working with [Twarcl](#), a command line tool for collecting and analyzing Twitter data. It is important to have a handle on basic commands so that you can work with the 1 October Twitter Data Collection later on in this tutorial series. Get started by downloading the materials below!

Difficulty level: Beginner

Optimized for: Mac users. Windows users can view the tutorial [here](#).

Prerequisite(s): None

Materials: [Download 'walt whitman.zip' to your desktop](#)

Tutorial Key

- **Command Line commands will be displayed in this format**
- 🎉 means you have come to the end of a set of instructions

Lesson objectives

- Use the command line to navigate your computer
- Create and move content around
- Make changes to existing files

Key Terms

- Terminal - OS X Command Line
 - A text interface for your computer. Terminal receives commands and then passes those commands on to the computer's operating system to run.
- Command

- A specific order from a user to the computer's operating system to perform a service
- Graphical-User Interface (GUI)
 - A visual form of user interface that allows users to interact with a computer through icons and other visual indicators
- Filepath
 - A unique address that specifies a location in a file system
- Directory
 - A location for storing files on your computer. A directory is the same thing as a folder; a folder is represented visually in a GUI.

Introduction

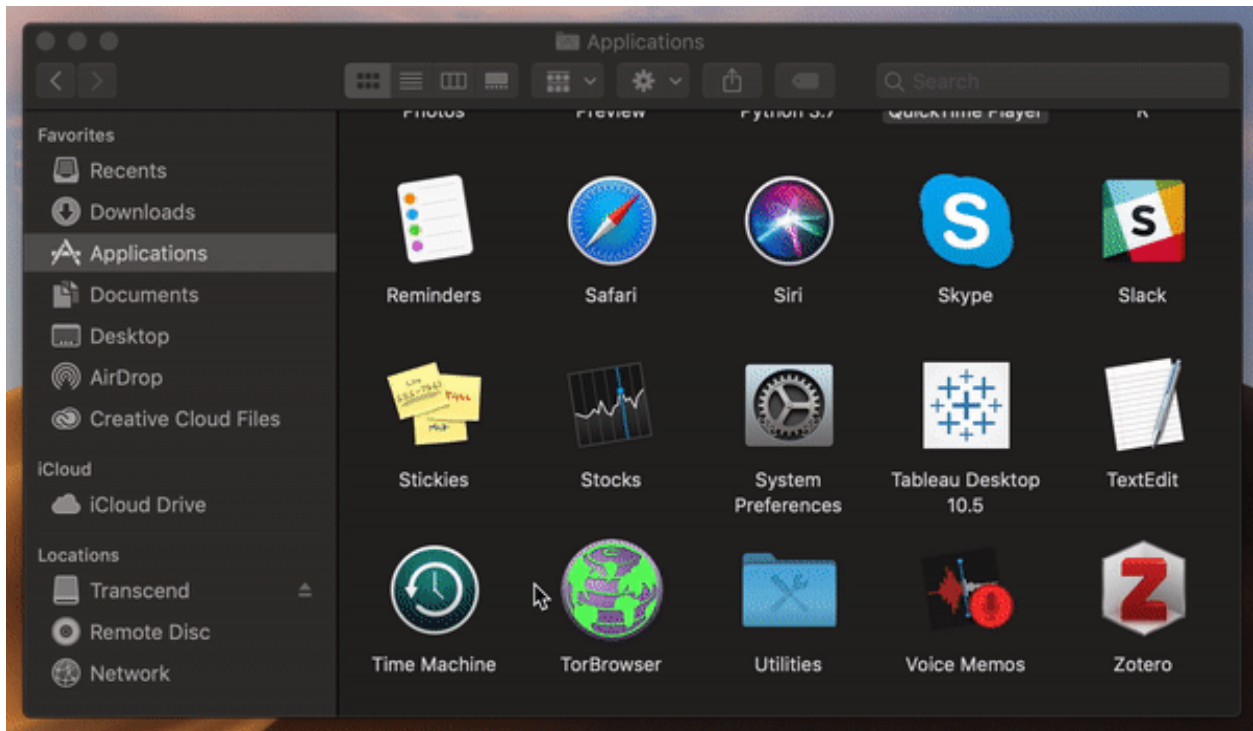

How do you create a new folder? Pick the option below that applies to you:

- a. Right-click on my desktop and click 'Create New Folder'
- b. Click on the tool button and then click 'New Folder'
- c. Will it into existence, I have the power within me
- d. I don't. I like my files to be free range.

If you selected C or D, chances are you are probably not having much success organizing your files. If you selected A or B, you are interacting with your system through a Graphical-User Interface (GUI). Before users relied on GUIs to move around their systems, the command-line interface was the primary way people would interact with their computers. While a GUI is a visual way for operating your computer, the Command Line is a text-based interface for doing the same tasks you perform when clicking, dragging, and dropping files. It has a range of capabilities that make it a powerful tool for those who need more precision in their work. In this tutorial, you will learn how to navigate your computer using the Command Line.

Getting started

There are two main command-line interfaces that are discussed in this tutorial series. On OS X the shell is known as bash, or the 'Bourne-again shell'. In OS X, the shell is located by default in: Applications > Utilities > Terminal. Let's get started by opening terminal.

Read through these tips and tricks before moving on to the next section:

Tips and tricks

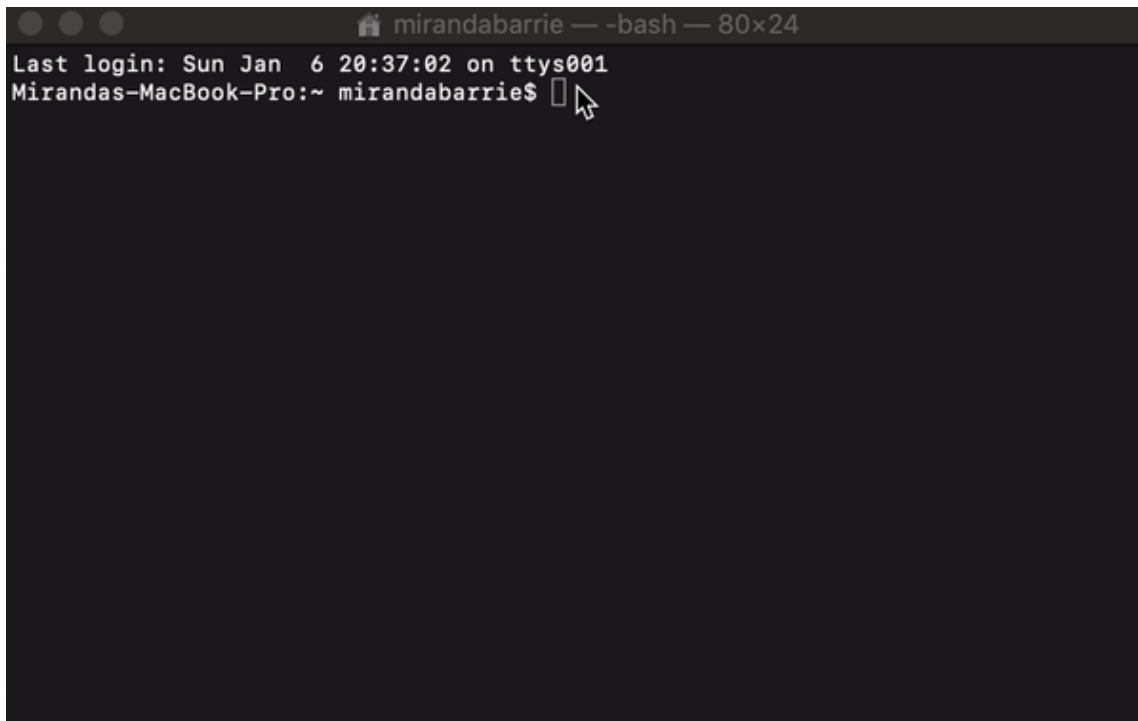

- ‘\$’ signals the shell prompt. You can tell when a process is complete when it returns to the shell prompt.
- Capitalization and spacing matters! Make sure to always double check your work.
- You can drag and drop folders into Terminal instead of typing out their filepath
- Using the up arrow on your keyboard will recall commands. Use this tip to waste less time writing out commands and lengthy filepaths.
- `0` moves your cursor to the start of the line
- `$` moves your cursor to the end of the line
- You can copy and paste by right clicking in Terminal

🎉Awesome work! You’re ready to start using Terminal. Scroll down to the next section.🎉

Moving Around Using Terminal

If you are feeling lost after opening Terminal, it is important to find out where you are in your filesystem. Go ahead and enter the following command to **print the working (your current) directory**:

pwd

A screenshot of a macOS Terminal window. The title bar at the top shows three window control buttons (red, yellow, green) on the left, followed by the text 'mirandabarrie — -bash — 80x24'. The terminal content shows 'Last login: Sun Jan 6 20:37:02 on ttys001' on the first line, and 'Mirandas-MacBook-Pro:~ mirandabarrie\$' on the second line. A mouse cursor is positioned at the end of the second line, ready for input.

Nice job! Now let's see which directories and files are available in your location by entering the **list files** command:

ls

```
mirandabarrie — -bash — 80x24
Last login: Sun Jan  6 20:37:02 on ttys001
Mirandas-MacBook-Pro:~ mirandabarrie$ pwd
/Users/mirandabarrie
Mirandas-MacBook-Pro:~ mirandabarrie$
```

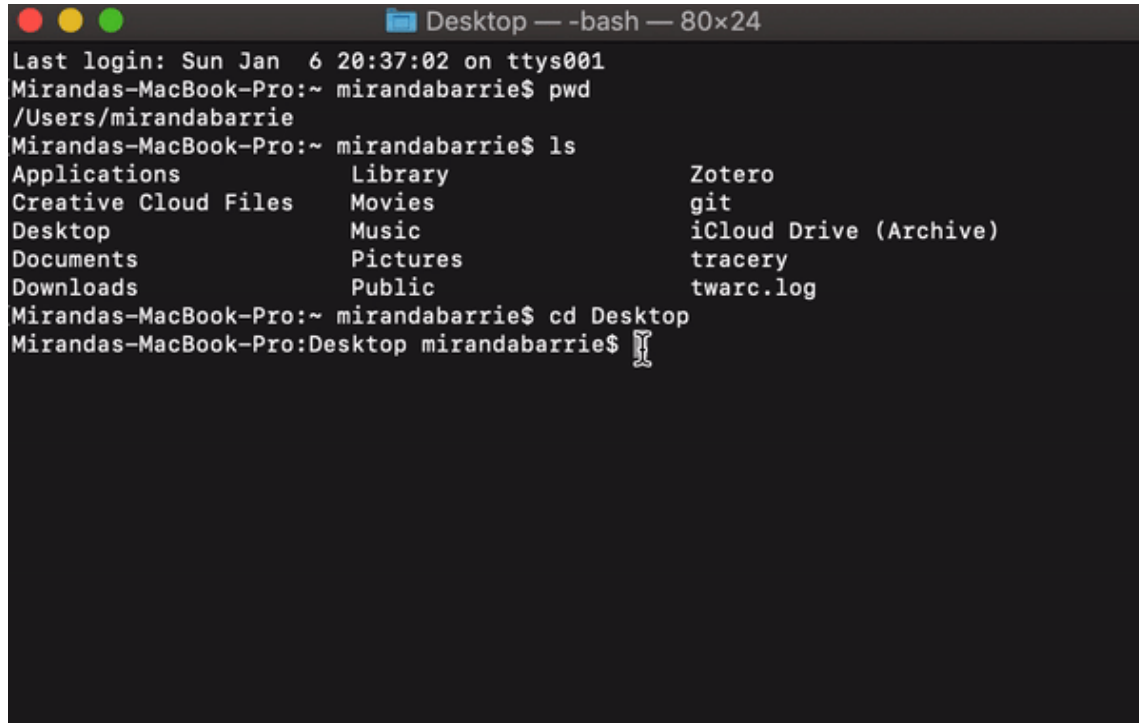

Let's change directories. Navigate to your desktop by entering the **change directory** command:

```
cd Desktop
```

```
mirandabarrie — -bash — 80x24
Last login: Sun Jan  6 20:37:02 on ttys001
Mirandas-MacBook-Pro:~ mirandabarrie$ pwd
/Users/mirandabarrie
Mirandas-MacBook-Pro:~ mirandabarrie$ ls
Applications      Library           Zotero
Creative Cloud Files  Movies           git
Desktop           Music            iCloud Drive (Archive)
Documents         Pictures         tracery
Downloads        Public          twarc.log
Mirandas-MacBook-Pro:~ mirandabarrie$
```

If you haven't already, go ahead and [click here to download the zip file](#) we will be working within this tutorial to your Desktop. After you've downloaded the file, let's create a directory that we can store the file in by entering the **make directory** command:

```
mkdir walt_whitman
```

A screenshot of a macOS terminal window titled 'Desktop — -bash — 80x24'. The terminal shows the following commands and output: 'Last login: Sun Jan 6 20:37:02 on ttys001', 'Mirandas-MacBook-Pro:~ mirandabarrie\$ pwd' returns '/Users/mirandabarrie', 'Mirandas-MacBook-Pro:~ mirandabarrie\$ ls' lists various folders and files including Applications, Library, Zotero, Creative Cloud Files, Movies, git, Desktop, Music, iCloud Drive (Archive), Documents, Pictures, tracery, Downloads, Public, and twarc.log. Finally, 'Mirandas-MacBook-Pro:~ mirandabarrie\$ cd Desktop' changes the directory to Desktop, and the prompt becomes 'Mirandas-MacBook-Pro:Desktop mirandabarrie\$' with a cursor at the end.

```
Desktop — -bash — 80x24
Last login: Sun Jan 6 20:37:02 on ttys001
Mirandas-MacBook-Pro:~ mirandabarrie$ pwd
/Users/mirandabarrie
Mirandas-MacBook-Pro:~ mirandabarrie$ ls
Applications      Library           Zotero
Creative Cloud Files  Movies           git
Desktop           Music            iCloud Drive (Archive)
Documents         Pictures         tracery
Downloads        Public          twarc.log
Mirandas-MacBook-Pro:~ mirandabarrie$ cd Desktop
Mirandas-MacBook-Pro:Desktop mirandabarrie$
```

We're going to move the 'walt_whitman' zip file you downloaded from your Desktop into your 'walt_whitman' directory by using a new command, **move**:

```
mv walt_whitman.zip walt_whitman
```

Note: If you're having trouble with this step, double check to make sure you moved the 'walt_whitman.zip' file from your to your downloads folder to your Desktop.

```
Desktop — -bash — 80x24
Last login: Fri Jan 25 11:40:24 on ttys001
u-10-82-0-107:~ mirandabarrie$ pwd
/Users/mirandabarrie
u-10-82-0-107:~ mirandabarrie$ ls
Applications      Movies            iCloud Drive (Archive)
Creative Cloud Files  Music            tracery
Desktop           Pictures          twarc.log
Documents         Public           walt_whitman
Downloads         Zotero
Library          git
u-10-82-0-107:~ mirandabarrie$ cd Desktop
u-10-82-0-107:Desktop mirandabarrie$ mkdir walt_whitman
u-10-82-0-107:Desktop mirandabarrie$
```

Navigate to your new directory using the **change directory** command:

```
cd walt_whitman
```

```
Desktop — -bash — 80x24
Last login: Sun Jan  6 20:37:02 on ttys001
Mirandas-MacBook-Pro:~ mirandabarrie$ pwd
/Users/mirandabarrie
Mirandas-MacBook-Pro:~ mirandabarrie$ ls
Applications      Library          Zotero
Creative Cloud Files  Movies          git
Desktop           Music           iCloud Drive (Archive)
Documents         Pictures        tracery
Downloads        Public         twarc.log
Mirandas-MacBook-Pro:~ mirandabarrie$ cd Desktop
Mirandas-MacBook-Pro:Desktop mirandabarrie$ mkdir walt_whitman
Mirandas-MacBook-Pro:Desktop mirandabarrie$ mv walt_whitman.zip walt_whitman
Mirandas-MacBook-Pro:Desktop mirandabarrie$
```

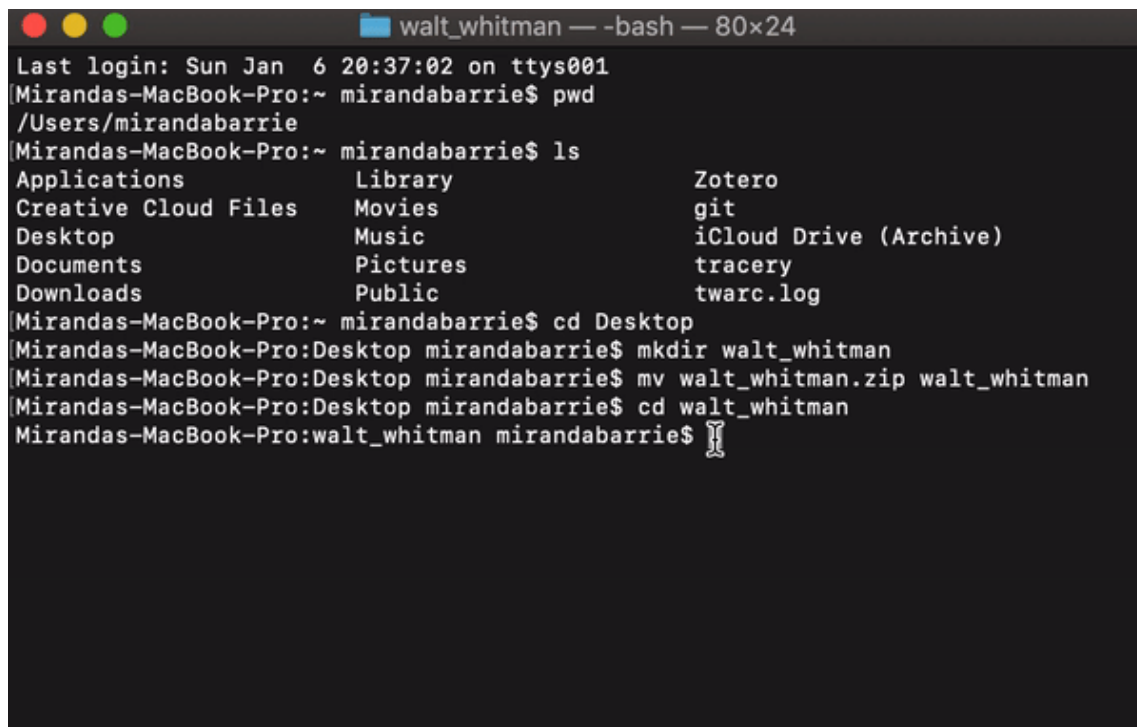

🎉 Good job! You're ready to move on to the next section. 🎉

Manipulating Files Using Terminal

Now that you know how to find your location in a filesystem, we're going to edit and move individual files around. We're going to start with the 'walt_whitman' zip file on your Desktop.

Double check to make sure that you are still in your 'walt_whitman' directory using the **print working directory** command:

```
pwd
```

A screenshot of a macOS terminal window titled 'walt_whitman — -bash — 80x24'. The terminal shows a series of commands and their outputs. The user starts in the home directory, runs 'pwd' to confirm the path, then 'ls' to list files. They then navigate to the Desktop, create a new directory 'walt_whitman', move 'walt_whitman.zip' to it, and finally change the current directory to 'walt_whitman'.

```
Last login: Sun Jan  6 20:37:02 on ttys001
Mirandas-MacBook-Pro:~ mirandabarrie$ pwd
/Users/mirandabarrie
Mirandas-MacBook-Pro:~ mirandabarrie$ ls
Applications      Library           Zotero
Creative Cloud Files  Movies           git
Desktop           Music            iCloud Drive (Archive)
Documents         Pictures         tracery
Downloads        Public          twarc.log
Mirandas-MacBook-Pro:~ mirandabarrie$ cd Desktop
Mirandas-MacBook-Pro:Desktop mirandabarrie$ mkdir walt_whitman
Mirandas-MacBook-Pro:Desktop mirandabarrie$ mv walt_whitman.zip walt_whitman
Mirandas-MacBook-Pro:Desktop mirandabarrie$ cd walt_whitman
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$
```

To get started, we need to unzip the file. Enter the **unzip** command to do so:

```
unzip walt_whitman.zip
```

```
walt_whitman — -bash — 80x24
Last login: Sun Jan  6 20:37:02 on ttys001
Mirandas-MacBook-Pro:~ mirandabarrie$ pwd
/Users/mirandabarrie
Mirandas-MacBook-Pro:~ mirandabarrie$ ls
Applications      Library           Zotero
Creative Cloud Files  Movies           git
Desktop           Music            iCloud Drive (Archive)
Documents         Pictures         tracery
Downloads        Public          twarc.log
Mirandas-MacBook-Pro:~ mirandabarrie$ cd Desktop
Mirandas-MacBook-Pro:Desktop mirandabarrie$ mkdir walt_whitman
Mirandas-MacBook-Pro:Desktop mirandabarrie$ mv walt_whitman.zip walt_whitman
Mirandas-MacBook-Pro:Desktop mirandabarrie$ cd walt_whitman
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$ pwd
/Users/mirandabarrie/Desktop/walt_whitman
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$
```

Let's see what's inside. Use the **list files** command:

ls

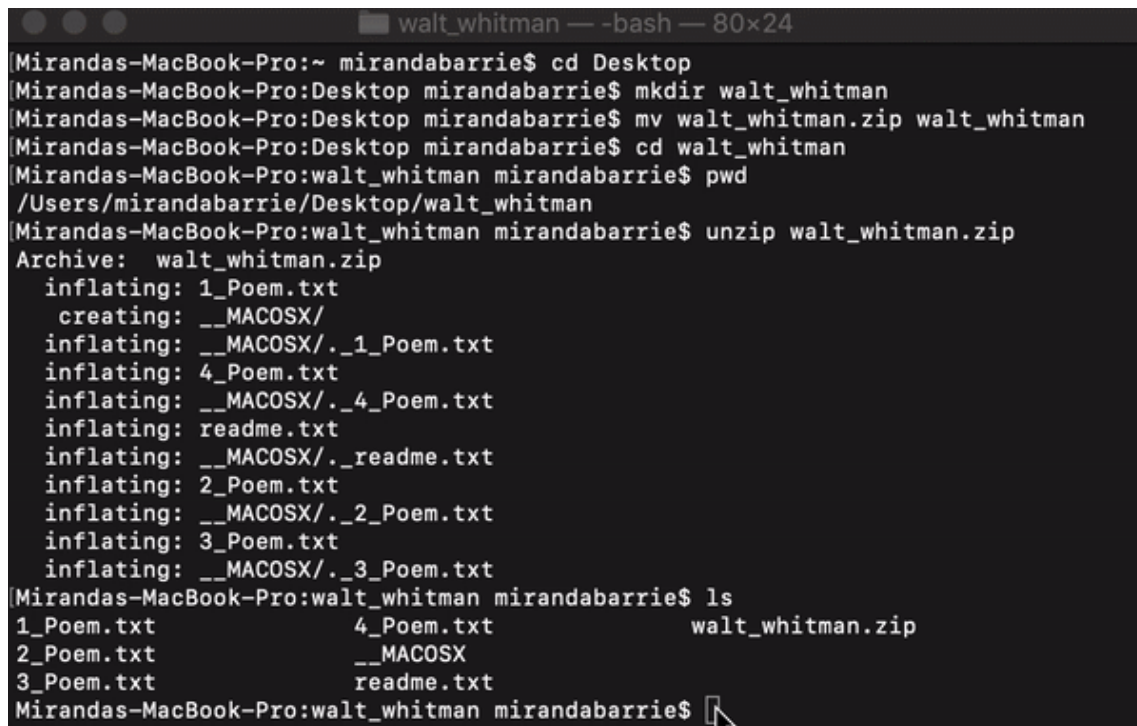

```
walt_whitman — -bash — 80x24
Creative Cloud Files  Movies           git
Desktop             Music            iCloud Drive (Archive)
Documents           Pictures         tracery
Downloads          Public          twarc.log
Mirandas-MacBook-Pro:~ mirandabarrie$ cd Desktop
Mirandas-MacBook-Pro:Desktop mirandabarrie$ mkdir walt_whitman
Mirandas-MacBook-Pro:Desktop mirandabarrie$ mv walt_whitman.zip walt_whitman
Mirandas-MacBook-Pro:Desktop mirandabarrie$ cd walt_whitman
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$ pwd
/Users/mirandabarrie/Desktop/walt_whitman
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$ unzip walt_whitman.zip
Archive:  walt_whitman.zip
  inflating: 1_Poem.txt
    creating: __MACOSX/
  inflating: __MACOSX/._1_Poem.txt
  inflating: 4_Poem.txt
  inflating: __MACOSX/._4_Poem.txt
  inflating: readme.txt
  inflating: __MACOSX/._readme.txt
  inflating: 2_Poem.txt
  inflating: __MACOSX/._2_Poem.txt
  inflating: 3_Poem.txt
  inflating: __MACOSX/._3_Poem.txt
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$
```

What you should see:

```
1_Poems.txt 2_Poems.txt 3_Poems.txt 4_Poems.txt readme.txt  
walt_whitman.zip
```

What a treat! You've unzipped four poems and a README plain text file. Let's find out how many lines and words are in the file '1_Poem.txt' by using the **word count** command:

```
wc -l -w 1_Poem.txt
```

```
walt_whitman — -bash — 80x24  
Mirandas-MacBook-Pro:~ mirandabarrie$ cd Desktop  
Mirandas-MacBook-Pro:Desktop mirandabarrie$ mkdir walt_whitman  
Mirandas-MacBook-Pro:Desktop mirandabarrie$ mv walt_whitman.zip walt_whitman  
Mirandas-MacBook-Pro:Desktop mirandabarrie$ cd walt_whitman  
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$ pwd  
/Users/mirandabarrie/Desktop/walt_whitman  
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$ unzip walt_whitman.zip  
Archive:  walt_whitman.zip  
  inflating: 1_Poem.txt  
    creating: __MACOSX/  
  inflating: __MACOSX/._1_Poem.txt  
  inflating: 4_Poem.txt  
  inflating: __MACOSX/._4_Poem.txt  
  inflating: readme.txt  
  inflating: __MACOSX/._readme.txt  
  inflating: 2_Poem.txt  
  inflating: __MACOSX/._2_Poem.txt  
  inflating: 3_Poem.txt  
  inflating: __MACOSX/._3_Poem.txt  
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$ ls  
1_Poem.txt          4_Poem.txt          walt_whitman.zip  
2_Poem.txt          __MACOSX  
3_Poem.txt          readme.txt  
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$
```

There are 397 lines and 2,451 words in the first poem.

Let's find out which poem it is! Start by using the **tail** command, which pulls up the last 10 lines of a text:

```
tail 1_Poem.txt
```

```
walt_whitman — -bash — 80x24
Mirandas-MacBook-Pro:Desktop mirandabarrie$ mv walt_whitman.zip walt_whitman
Mirandas-MacBook-Pro:Desktop mirandabarrie$ cd walt_whitman
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$ pwd
/Users/mirandabarrie/Desktop/walt_whitman
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$ unzip walt_whitman.zip
Archive:  walt_whitman.zip
  inflating: 1_Poem.txt
   creating: __MACOSX/
  inflating: __MACOSX/._1_Poem.txt
  inflating: 4_Poem.txt
  inflating: __MACOSX/._4_Poem.txt
  inflating: readme.txt
  inflating: __MACOSX/._readme.txt
  inflating: 2_Poem.txt
  inflating: __MACOSX/._2_Poem.txt
  inflating: 3_Poem.txt
  inflating: __MACOSX/._3_Poem.txt
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$ ls
1_Poem.txt          4_Poem.txt          walt_whitman.zip
2_Poem.txt          __MACOSX
3_Poem.txt          readme.txt
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$ wc -l -w 1_Poem.txt
 397   2451 1_Poem.txt
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$
```

What you should see:

of woe,
With the holders holding my hand nearing the call of the bird,
Comrades mine and I in the midst, and their memory ever to
keep, for the dead I loved so well,
For the sweetest, wisest soul of all my days and lands—and this
for his dear sake,
Lilac and star and bird twined with the chant of my soul,
There in the fragrant pines and the cedars dusk and dim.

<https://whitmanarchive.org/published/LG/1891/clusters/192>

So that didn't give us the title, let's try and see if using the **head** command to get the first 10 lines of a text will help:

```
head 1_Poem.txt
```

```
walt_whitman — -bash — 80x24
inflating: readme.txt
inflating: __MACOSX/._readme.txt
inflating: 2_Poem.txt
inflating: __MACOSX/._2_Poem.txt
inflating: 3_Poem.txt
inflating: __MACOSX/._3_Poem.txt
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$ ls
1_Poem.txt          4_Poem.txt          walt_whitman.zip
2_Poem.txt          __MACOSX
3_Poem.txt          readme.txt
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$ wc -l -w 1_Poem.txt
    397    2451 1_Poem.txt
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$ tail 1_Poem.txt
of woe,
With the holders holding my hand nearing the call of the bird,
Comrades mine and I in the midst, and their memory ever to
keep, for the dead I loved so well,
For the sweetest, wisest soul of all my days and lands—and this
for his dear sake,
Lilac and star and bird twined with the chant of my soul,
There in the fragrant pines and the cedars dusk and dim.

https://whitmanarchive.org/published/LG/1891/clusters/192Mirandas-MacBook-Pro:wa
lt_whitman mirandabarrie$
```

What you should see:

WHEN LILACS LAST IN THE DOORYARD BLOOM'D.

1

WHEN lilacs last in the dooryard bloom'd,
And the great star early droop'd in the western sky in the night,
I mourn'd, and yet shall mourn with ever-returning spring.

Ever-returning spring, trinity sure to me you bring,
Lilac blooming perennial and drooping star in the west,

Looks like we tracked down the title of the poem. Let's rename the file to match the poem's title. You can do this using the **move** command you learned earlier:

```
mv 1_Poem.txt when_lilacs_last.txt
```

```
walt_whitman — -bash — 80x24
397 2451 1_Poem.txt
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$ tail 1_Poem.txt
of woe,
With the holders holding my hand nearing the call of the bird,
Comrades mine and I in the midst, and their memory ever to
keep, for the dead I loved so well,
For the sweetest, wisest soul of all my days and lands—and this
for his dear sake,
Lilac and star and bird twined with the chant of my soul,
There in the fragrant pines and the cedars dusk and dim.

https://whitmanarchive.org/published/LG/1891/clusters/192Mirandas-MacBook-Pro:walt_whitman mirandabarrie$ head 1_Poem.txt
WHEN LILACS LAST IN THE DOORYARD BLOOM'D.

1

WHEN lilacs last in the dooryard bloom'd,
And the great star early droop'd in the western sky in the night,
I mourn'd, and yet shall mourn with ever-returning spring.

Ever-returning spring, trinity sure to me you bring,
Lilac blooming perennial and drooping star in the west,
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$
```

Let's check out the 'readme.txt' file to see if it tells us about any of the other poems. You can open the file by using the **cat** command:

```
cat readme.txt
```

Note: The cat command will read a file, but it can also combine files

```
walt_whitman — -bash — 80x24
of woe,
With the holders holding my hand nearing the call of the bird,
Comrades mine and I in the midst, and their memory ever to
keep, for the dead I loved so well,
For the sweetest, wisest soul of all my days and lands—and this

Lilac and star and bird twined with the chant of my soul,
There in the fragrant pines and the cedars dusk and dim.

https://whitmanarchive.org/published/LG/1891/clusters/192Mirandas-MacBook-Pro:walt_whitman mirandabarrie$ head 1_Poem.txt
WHEN LILACS LAST IN THE DOORYARD BLOOM'D.

1

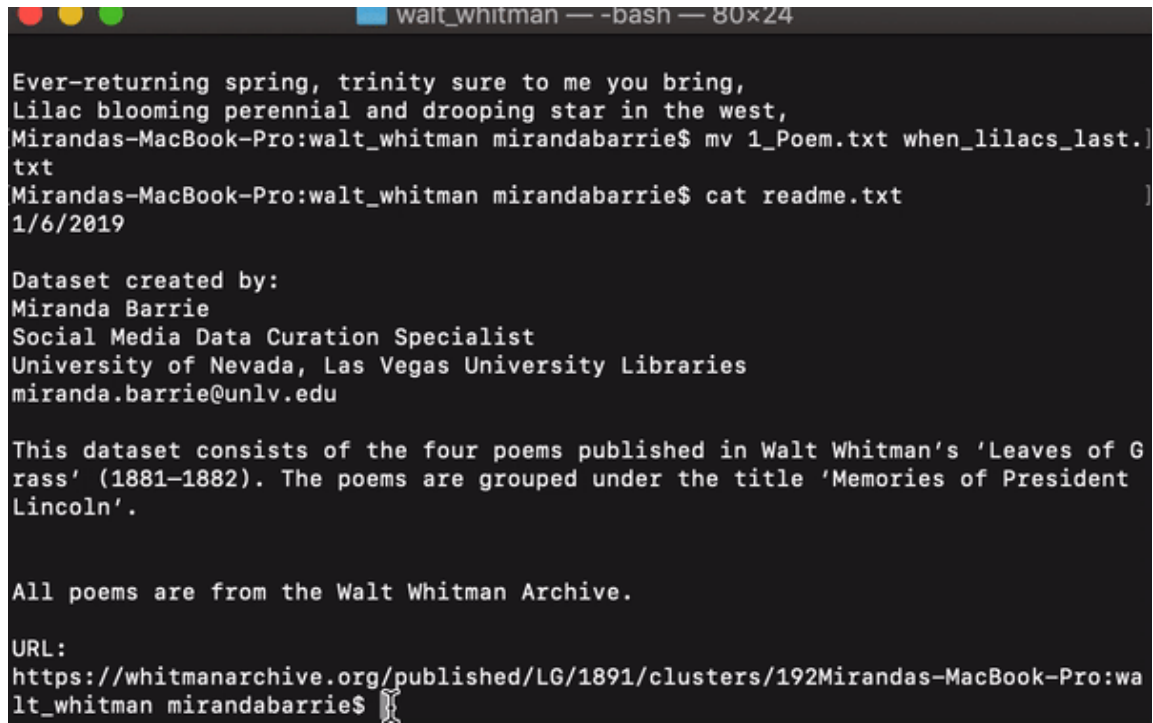

WHEN lilacs last in the dooryard bloom'd,
And the great star early droop'd in the western sky in the night,
I mourn'd, and yet shall mourn with ever-returning spring.

Ever-returning spring, trinity sure to me you bring,
Lilac blooming perennial and drooping star in the west,
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$ mv 1_Poem.txt when_lilacs_last.txt
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$
```

Looking at the README file we see that the other three poems are part of Walt Whitman's 'Memories of President Lincoln'. If you want to read the other poems, you know how to open them using the cat command.

Before we exit Terminal, let's get rid of the 'walt_whitman.zip' file since we don't need it anymore. Do this by entering the **remove** command:

```
rm walt_whitman.zip
```

A terminal window titled 'walt_whitman — -bash — 80x24' is shown. The window has a dark background with light-colored text. The user has entered the command 'mv 1_Poem.txt when_lilacs_last.txt' and then 'cat readme.txt'. The output of the 'cat' command is displayed, showing the date '1/6/2019', the creator's name 'Miranda Barrie', her title 'Social Media Data Curation Specialist', her affiliation 'University of Nevada, Las Vegas University Libraries', and her email 'miranda.barrie@unlv.edu'. It also describes the dataset as four poems from Walt Whitman's 'Leaves of Grass' (1881-1882) grouped under 'Memories of President Lincoln'. The URL 'https://whitmanarchive.org/published/LG/1891/clusters/192' is partially visible. The prompt 'Mirandas-MacBook-Pro:walt_whitman mirandabarrie\$' is shown at the bottom.

```
walt_whitman — -bash — 80x24
Ever-returning spring, trinity sure to me you bring,
Lilac blooming perennial and drooping star in the west,
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$ mv 1_Poem.txt when_lilacs_last.
txt
Mirandas-MacBook-Pro:walt_whitman mirandabarrie$ cat readme.txt
1/6/2019

Dataset created by:
Miranda Barrie
Social Media Data Curation Specialist
University of Nevada, Las Vegas University Libraries
miranda.barrie@unlv.edu

This dataset consists of the four poems published in Walt Whitman's 'Leaves of G
rass' (1881-1882). The poems are grouped under the title 'Memories of President
Lincoln'.

All poems are from the Walt Whitman Archive.

URL:
